Alpha Networkxxx
IT solutions for everyone's needs

Alpha Networkxx
IT solutions for everyone's needs

An Overview of Alpha Networkxx

With more than a decade of experience and ingeniousness in the domain of IT and Telecom solutions, Alpha Networkxx has evolved as the most prominent and sought after companies in the UAE.

Presenting a wide array of services to a variety of sectors including hospitality, health, construction, small and medium enterprises, startups, etc; we have hand-carried more than 500 projects within the UAE.

Alpha Networkxx has the proper credentials and wisdom along with multidisciplinary knowledge and skills which helps us to accomplish our mission to provide end-to-end solutions to the growing industry and market requirements across the UAE. Apart from IT and Telecom, Alpha Networkxx has carved a niche for itself in providing access control and security solutions. With the extensive mastery gained through the perfect exposure in serving enterprise businesses, Alpha Networkxx is hailed above any other company for many major enterprises and government entities in the MEA region.

■ "I would like to thank Alpha Networkxx for the constant support they have provided us. Not only that, the team is a group of highly qualified professionals who want to deliver the best every time. With their help and constant support, our hospital network is really stable now and their suggestion to upgrade our network was the best thing that could have happened to our hospital."

Nadeem Khan - CIO
Gulf Diagnostic Center Hospital

■ "The Alpha Networkxx team has provided excellent support throughout in understanding our network and business processes through their functional and domain expertise combined with technology and product knowledge. Their efforts led to an efficient & secure service delivery process. Thank you for your support."

Chabok A. Muhammed - Vice General Manager
Kurdistan International Bank

Services

Implementation Services

Security solutions and infrastructure projects in all phases from conceptualization to planning, implementation and operation.

Product Enhancement

Team of skilled security consultants is often enhancing the functionality of vendor solutions.

Architectural and Configuration Review

Architectural review targeted toward securing the network.

Performance Assessment

Provides a quick snapshot of the current network with an examination of the infrastructure, performance, availability.

Security Assessment

It is an important tool for any organization in order to understand the precautions taken against the everyday security risks.

Solutions

Network Security

We employ industry experts within the field of Network Security and are able to apply the expertise of Alpha Networxx organization onto customer IT environments.

Remote Access Solutions

A Remote Access Solution should in itself be secure, but since the Remote Access Solution becomes the interface where data is presented through it is also important that extra care is taken in securing this data.

Network Behaviour Analysis

A vast majority of malicious applications such as spyware and botnet activity is very difficult to identify for traditional network security devices, but a network behaviour analysis solution will be able to identify the change in behaviour from infected hosts.

Network Access Control

Solutions like Network Access Control provide an organization a possibility to control which devices are allowed on the network, and which state this device is in.

Data Security And Encryption

By deploying a strong encryption policy of sensitive data the basic problem of losing sensitive data is being addressed since if a device is lost no data on the endpoint can be accessed without the proper authentication.

Application Hardening

Alpha Networxx's web application security audit evaluates the web application security both from an attacker's and an authorized user's point of view.

Web Application Firewall

Web Application Firewalls help reduce the weaknesses by acting as an application-aware layer of defence with the capability to drop malicious traffic and communication.

Data Loss Prevention

Alpha Networxx offers services in the field of implementation of Data Loss Prevention solutions and consultancy on classification of data and risk assessments of data sources.

Content Control And Acceleration

Alpha Networxx offers services and technical solutions to allow organizations to gain the most of their investment by optimizing data flows and controlling the applications traversing the communication links.

IP Address Management

More efficient way of handling IP address assignment, DNS registration and DHCP services and identification of where IP addresses are located, right down to the switch port level.

End Point Security And Antivirus

Today any endpoint antivirus is much more than an antivirus and offers bundled features such as client Intrusion Prevention Detection, Anti-Malware, Device Control and Firewall. We can assist in assessment of efficiency of an existing endpoint security solution and assist in tuning the solution.

Next Generation Firewalls

The Next Generation Firewall technologies are trying to bridge this gap by integrating signature based matching in the firewall in order to identify modern applications, while also adding advanced threat management such as IPS functionality, Antivirus Checking and Malware detection.
